

Question	Answers	Notes	Total	
1	<p><b>a</b></p> <p>Production of offspring  <input type="text" value="Reproduction"/></p> <p>Permanent increase in size  <input type="text" value="Growth"/></p> <p>Reaction to an internal or external stimulus  <input type="text" value="Response"/></p> <p>One correct  All correct</p>		2	A
	<p><b>b</b></p> <p><b>One reasonable feature, for example [max 1]</b></p> <ul style="list-style-type: none"> <li>• large size or surface area</li> <li>• can flap ears</li> <li>• thin</li> <li>• increased blood flow or can vasodilate</li> </ul> <p><b>Link to heat loss, for example [max 1]</b></p> <ul style="list-style-type: none"> <li>• large area for heat loss or evaporative cooling</li> <li>• can fan itself or create a breeze</li> <li>• smaller distance for heat exchange</li> <li>• increased heat exchange as blood carries heat away from body to ears</li> </ul>	<p><i>Do not accept to balance body temperature</i></p>	2	A
	<p><b>c</b></p> <p>(larger surface area) means more light can be absorbed <b>or</b> more chlorophyll present  <b>or</b>  More stomata may be present</p> <p><b>Any correct justification from the list, [max 1]</b></p> <ul style="list-style-type: none"> <li>• (more) photosynthesis or glucose produced</li> <li>• (more) transpiration</li> <li>• (more) gas exchange</li> </ul>	<p><i>Allow absorbance of CO<sub>2</sub>, ignore reference to O<sub>2</sub></i></p>	2	A

<b>d</b>	(smaller surface area) minimizes water loss <b>or</b> (cacti) can survive in areas with limited water  (due to) less evaporation or transpiration	<i>Do not accept protection against being eaten</i>	<b>2</b>	<b>A</b>
<b>e</b>	(large) surface area allows for more efficient exchange of (named) materials <b>or</b> heat  (small) volume means fewer metabolic processes <b>or</b> less material required <b>or</b> shorter distance for materials to travel  (high) SA to V ratio allows exchange rates to meet metabolic needs	<i>Do not award mp1 when the ratio is used.</i>	<b>3</b>	<b>A</b>

2	a	<p>Phytoplankton → Copepods → Pacific herring → Pacific halibut → Resident killer whale</p> <p>or</p> <p>Phytoplankton → Krill → Armhook squid → Pacific halibut → Resident killer whale</p> <p>or</p> <p>Phytoplankton → Krill → Pacific herring → Pacific halibut → Resident killer whale</p> <p>All correct</p>		1	A
	b	<p>Killer whales feed on organisms from different trophic levels</p> <p>Armhook squid <b>or</b> pacific herring are secondary consumers  <b>and</b>  chinook salmon <b>or</b> pacific halibut are tertiary consumers</p> <p><b>or</b></p> <p>Killer whales are tertiary consumers when they eat armhook squid <b>or</b> pacific herring  <b>and</b>  killer whales are quaternary consumers when they eat chinook salmon <b>or</b> pacific halibut</p>	<p><i>Mp1 can be shown through complete food chains. Allow ref to food chain in 2a.</i></p> <p><i>Mp2 gets mp1.</i></p>	2	A
	c	<p>To reduce competition</p> <p><b>or</b></p> <p>They eat what is (abundant) in their areas</p>	WTTE	1	A
	d	<p><b>Relevant differences between the whales, for example, [max 2]</b></p> <ul style="list-style-type: none"> <li>• fins size or shape</li> <li>• size</li> <li>• patches or markings</li> <li>• prey</li> <li>• communication</li> </ul> <p>Could stop them interbreeding</p> <p>However further data is needed to confirm this hypothesis</p>	<p><i>Accept physical differences, behavioural differences, different hunting preferences, different geographical locations</i></p>	4	A

<p><b>e</b></p>	<p>(Genome mapping) compares the genetic code (of different organisms)</p> <p>Genetic similarities or differences can be used to decide if they are different species or not</p> <p>A correct use of the term base <b>or</b> chromosome <b>or</b> DNA <b>or</b> gene <b>or</b> genetic</p>	<p><i>WTTE</i></p> <p><i>Mp2 implies mp 1</i></p> <p><i>Only award mp3 if one of the previous mp is given.</i></p>	<p><b>3</b></p>	<p><b>A</b></p> <p><b>D</b></p>
<p><b>f</b></p>	<p>(Yes) references to more than one difference between the whales</p> <p><b>or</b></p> <p>(No) not enough information or variation within a species is natural or they are still too similar</p>	<p><i>Accept reference to sub-species or ecotype, not type.</i></p>	<p><b>1</b></p>	<p><b>A</b></p>

3	a	Tape measure		1	B
	b	54 years	<i>Check table and response box for value</i>	1	C
	c	<b>Accept any reasonable suggestion, for example [max 1]</b> <ul style="list-style-type: none"> <li>values in different units will lead to incorrect estimates</li> <li>depends on the units in the growth factor</li> </ul>		1	B
	d	<b>Please award zero for this question</b>		0	
	e	<b>Accept any reasonable justification, for example [max 1]</b> <ul style="list-style-type: none"> <li>wood at the top of the tree is younger</li> <li>the age may be underestimated</li> <li>distance between rings is bigger (so easier to count)</li> </ul>	ORA	1	C
	f	Tropical one has a wider diameter <b>or</b> circumference <b>or</b> larger cross-section Faster growth due to more optimal conditions <b>or</b> there are fewer limiting factors Tropical one has no <b>or</b> less obvious growth rings Less (no) significant seasonal variation <b>or</b> trees grow continuously	<i>Accept named example, ORA</i> <i>Do not accept references to size of bark</i>	4	C
	g	<b>Accept any reasonable limitation for growth factor values, for example [max 1]</b> <ul style="list-style-type: none"> <li>using growth factors only gives an estimate</li> <li>growth factor values are (global) averages</li> <li>growth can be affected by variables not considered in the growth factor</li> </ul> <b>Accept any reasonable limitation for counting growth rings, for example [max 1]</b> <ul style="list-style-type: none"> <li>counting rings can only be done on dead trees</li> <li>cannot be used for trees without growth rings (like tropical trees)</li> </ul>	<i>Accept named factor like location, climate, disease or damage</i> <i>Do not accept references to human error</i>	2	C

<b>4</b>	<b>a</b>	Too long to do the whole forest  (Random sample) is representative (of the forest) <b>or</b> avoids bias	<i>WTTE</i>	<b>2</b>	<b>B</b>												
	<b>b</b>	<b>Accept any reasonable suggestion, for example [max 1]</b> <ul style="list-style-type: none"> <li>• use a random number generator to select coordinates on the map</li> <li>• drop a pin (on a map)</li> </ul>		<b>1</b>	<b>B</b>												
	<b>c</b>	Student B <b>and</b> this prediction links DV to IV <b>or</b> Student B and is the only one with the correct DV (measuring height)	<i>ORA</i>	<b>1</b>	<b>B</b>												
	<b>d</b>	Given age in months <b>or</b> Use more significant figures <b>or</b> do not round (values) <b>or</b> Take the average height of trees for each age		<b>1</b>	<b>C</b>												
	<b>e</b>	2 points correctly plotted  All 5 points correctly plotted  x axis label Age <b>and</b> y axis label Height  Units for age and height given as y(ears) <b>and</b> m(etres)  Title refers to age <b>and</b> height  Title includes reference to sycamore tree	<table border="1"> <thead> <tr> <th><i>Age / y</i></th> <th><i>Height / m</i></th> </tr> </thead> <tbody> <tr> <td>80</td> <td>22</td> </tr> <tr> <td>40</td> <td>17</td> </tr> <tr> <td>20</td> <td>12</td> </tr> <tr> <td>10</td> <td>7</td> </tr> <tr> <td>5</td> <td>3</td> </tr> </tbody> </table>	<i>Age / y</i>	<i>Height / m</i>	80	22	40	17	20	12	10	7	5	3	<b>6</b>	<b>C</b>
	<i>Age / y</i>	<i>Height / m</i>															
80	22																
40	17																
20	12																
10	7																
5	3																
<b>f</b>	(Growth rate is) initially rapid <b>or</b> tree grows fast at the start  (Growth rate) slows with age <b>or</b> plateaus (but does not stop)	<i>Do not accept references to linear or proportional relationships Mp2 gains mp1</i>	<b>2</b>	<b>C</b>													

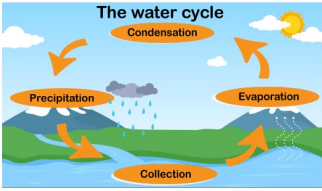

5	a	<p><b>IV:</b> Height from which the seed is dropped</p> <p><b>DV:</b> Time spent in the air</p> <p><b>Accept any two control variables, for example [max 2]</b></p> <ul style="list-style-type: none"> <li>• mass of seed <b>or</b> one paperclip used</li> <li>• length of wings</li> <li>• angle of wing</li> <li>• no wind in the testing space</li> </ul>	<p><i>All variables must be qualified</i></p> <p><i>Accept same seed for one CV. 2<sup>nd</sup> CV must then not refer to properties of the seed</i></p>	4	B
	b	<p>Only tested three heights</p> <p>Only two repeats per height</p>	<p><i>Accept reference to number not being enough</i></p>	2	C
	c	<p><b>Accept any relevant improvement, for example [max 2]</b></p> <ul style="list-style-type: none"> <li>• increase the height</li> <li>• reduce the mass <b>or</b> size of the seeds</li> <li>• change the shape of the paper model</li> <li>• carry out the experiment outside</li> </ul> <p><b>Accept any correctly linked justification, for example [max 2]</b></p> <ul style="list-style-type: none"> <li>• trees are taller than 2 metres</li> <li>• seeds are much lighter <b>or</b> smaller than the paper models</li> <li>• (change the size) to better match the size of real seeds</li> <li>• (outside would give) a more realistic environment</li> </ul>		4	C

6			16	B
---	--	--	----	---

	1 mark	2 marks	3 marks	4 marks	Notes
1.V	Explicitly states appropriate: IV <b>or</b> DV	Explicitly states appropriate: IV <b>and</b> DV	Explicitly states appropriate: IV <b>and</b> DV <b>and</b> one CV	Explicitly states appropriate: IV <b>and</b> DV <b>and</b> two CVs	<p>Only requirement is to state using the terminology of IV, DV and CV. No need to explain further.</p> <p>Do <b>not</b> accept reversed IV and DV.</p> <p>Do <b>not</b> accept "keeping equipment the same" as a CV.</p> <p>Do <b>not</b> accept calculated values as DV unless explicitly shown how calculated from measured values.</p>
2.H	Formulates a hypothesis connected to the variables but not explicitly linked to time	Formulates a hypothesis correctly linked to time with no explanation	Formulates a hypothesis with reasoning linked to relevant scientific ideas		<p>For two marks change alone is not good enough, IV and DVs need the direction of change.</p> <p>Scientific ideas might include drag, air resistance.</p>
3.E	Protractor <b>and</b> stopwatch				
4.M	Method is linked to IV <b>or</b> DV	Method is linked to IV <b>and</b> DV but is incomplete	Method linked to IV <b>and</b> DV and can be followed	Method linked to IV <b>and</b> DV and can be followed and include details on how to control main CVs	<p>A method that does not include how to vary the IV is incomplete and cannot be followed.</p> <p>Limited information about main CVs mean that data is unlikely to be relevant.</p> <p>If the method is repeated with a second IV, the maximum mark is 1 as there can only be one IV.</p>

5.D	Plans to conduct at least three trials <b>or</b> measures time for at least five different IV increments	Plans to conduct at least three trials <b>and</b> measures time for at least five angles	Plans to conduct at least three trials <b>and</b> measures time for at least five stated angles <b>and</b> plans to calculate averages		<i>The values of the five or more IV variations should be explicitly stated for 3 marks.</i>
6.S	A relevant comment about safety that is specific to the investigation				<i>Do not accept general considerations not linked to the specific investigation, e.g. wear a mask, tie hair back.</i>  <i>Accept a comment about there not being any safety concerns if this is true for the planned investigation.</i>

7	a	<p><b>Excretion of waste:</b> Waste builds up in the body <b>or</b> more water is reabsorbed  (so) urine volume decreases <b>or</b> urine becomes more concentrated</p> <p><b>Temperature control:</b> Sweat production decreases or less evaporative cooling  (so) harder to regulate body temperature or cool down</p>	<p><i>Accept toxins for waste. Accept harder stool or feces or constipation for mp1</i></p>	4	D
	b	<p>Two arrows pointing left only  Large arrow pointing left <b>and</b> small arrow pointing right</p>	<p><i>Mp2 gains mp1</i></p>	2	A
	c	<p><b>Accept any two impacts on ecosystems, for example [max 2]</b></p> <ul style="list-style-type: none"> <li>• habitat destruction</li> <li>• space needed for equipment</li> <li>• disposal of concentrated waste</li> </ul> <p><b>Accept any two consequences of high energy use, for example [max 2]</b></p> <ul style="list-style-type: none"> <li>• emissions from fossil fuels</li> <li>• cost (of fuels)</li> <li>• fresh water produced may be expensive to buy</li> <li>• renewable energy source means consequences are low impact</li> </ul> <p><b>A concluding appraisal considering the benefits of a reliable supply of fresh water</b></p>	<p><i>Do not accept a decrease in sea water</i></p>	5	D

8	a	 <p>The water cycle diagram shows four stages: Condensation (clouds forming), Evaporation (water rising from the ocean), Precipitation (rain falling on land and water), and Collection (water flowing into a river). The title is 'The water cycle'.</p> <p>All correct</p>		1	A
	b	<p><b>Accept any reasonable consequence of increased precipitation, for example [max 1]</b></p> <ul style="list-style-type: none"> <li>• flooding</li> <li>• decrease in water quality</li> <li>• change in growing season</li> <li>• loss of habitat</li> </ul> <p><b>Accept any reasonable consequence of decreased precipitation, for example [max 1]</b></p> <ul style="list-style-type: none"> <li>• drought</li> <li>• effect on water supply (animals, humans, agriculture)</li> <li>• change in growing season</li> <li>• (fertile) land gained from lowering river levels</li> <li>• wildfires</li> </ul>		2	D

8	c		12	D
---	---	--	----	---

Steps that could be taken to reduce water shortage in the home		
Mark	Descriptor	Notes
1	A statement of how water is used in the home	<p><b>Examples of statements</b></p> <ul style="list-style-type: none"> <li>• taking a shower</li> <li>• washing clothes</li> <li>• watering plants in the garden</li> </ul> <p><b>Examples of justifications</b></p> <ul style="list-style-type: none"> <li>• turning the shower off while using shampoo to wash your hair</li> <li>• using the water saving settings on the washing machine</li> <li>• using water left over from other task (grey water) to water the garden</li> </ul>
2	A statement of how water is used in the home <b>and</b> a justification of how this use can be reduced	
3	Statements of at least two uses of water in the home <b>and</b> justification of how <b>both</b> of these uses can be reduced	

**A description of how an individual's dietary choices can affect their water footprint**

Mark	Descriptor	Notes
1	A simple reference to the use of water in food production <b>or</b> transportation	<p><b>Examples of simple references</b></p> <ul style="list-style-type: none"> <li>• crops must be watered</li> <li>• 15 415 l of water are required to produce 1 kg of beef</li> </ul> <p><b>Examples of statements</b></p> <ul style="list-style-type: none"> <li>• meat-based diet increases water footprint</li> <li>• eating more vegetables reduces water footprint</li> <li>• buying seasonal produce decreases water footprint</li> </ul> <p><b>Examples of supporting evidence</b></p> <ul style="list-style-type: none"> <li>• beef requires the highest volume of water to produce 1 kg</li> <li>• less water is used to prepare or process the produce</li> <li>• less water is required to transport the food (from where it is grown)</li> </ul>
2	A statement of the effect of one dietary choice on water footprint	
3	A statement of the effect of <b>two</b> dietary choices on water footprint <b>and</b> one supported by evidence	
4	A statement of the effect of <b>two</b> dietary choices on water footprint <b>and</b> both supported by evidence	

A suggestion of how government policies can influence water usage		
Mark	Descriptor	Notes
1	A statement of a government action	<p><b>Examples of government actions</b></p> <ul style="list-style-type: none"> <li>• educate about sustainable water use</li> <li>• encourage through campaigns</li> <li>• enforce by passing water use laws or imposing limits</li> </ul> <p><b>Examples of how actions would reduce water usage</b></p> <ul style="list-style-type: none"> <li>• making sustainable water use part of the curriculum would give people the tools to make sustainable decisions</li> <li>• subsidising water efficient technology would encourage consumers to buy it</li> <li>• tax or fine industries for excessive water use</li> </ul>
2	A statement of a government action <b>and</b> how this would reduce water usage	
3	Two government actions <b>and</b> how <b>both</b> would reduce water usage	

Conclusion (Concluding appraisal)		
Mark	Descriptor	Notes
1	A basic conclusion	<p><b>Examples of a basic conclusion</b></p> <ul style="list-style-type: none"> <li>• as individuals we can make small steps to reduce the water we use daily</li> <li>• too much water is wasted in food production</li> </ul> <p><b>Examples of an appraisal</b></p> <ul style="list-style-type: none"> <li>• everyone can do their bit, but domestic usage is tiny compared to industry and agriculture.</li> <li>• governments actions can directly affect individual choices Imposing rules can ensure that individuals use water responsibly</li> </ul>
2	An appraisal including actions by both individuals and groups
