**Mathematics: applications and interpretation**  
**Higher level**  
**Paper 1**

Monday 31 October 2022 (afternoon)

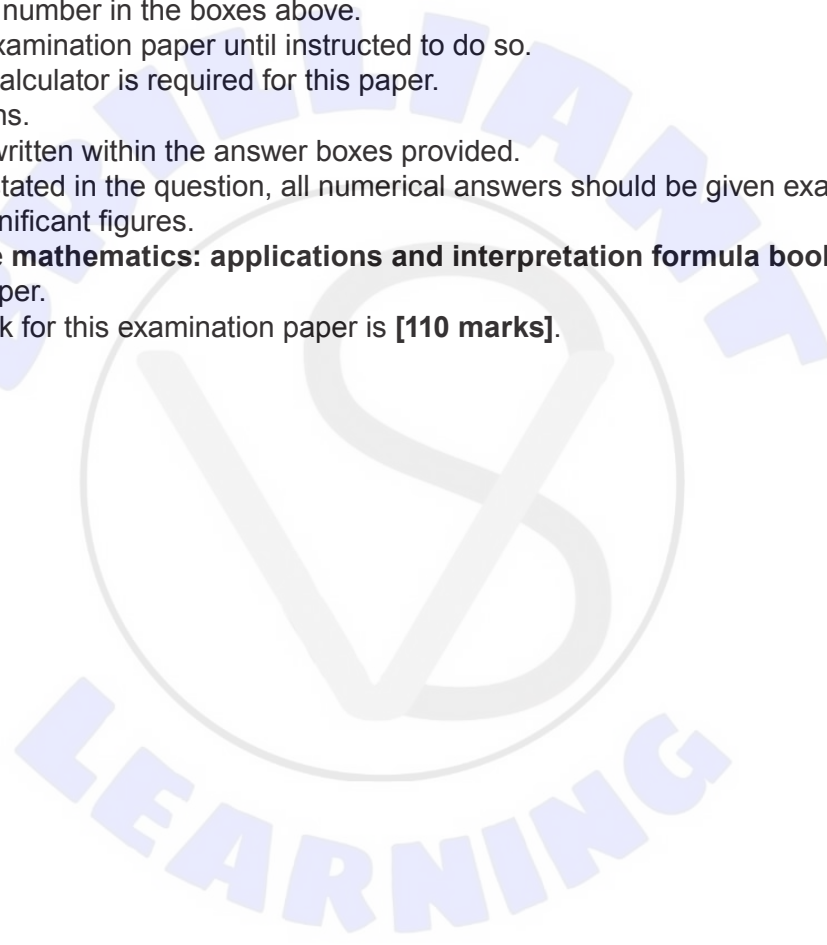

Candidate session number

2 hours

--	--	--	--	--	--	--	--	--	--

**Instructions to candidates**

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- A graphic display calculator is required for this paper.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A clean copy of the **mathematics: applications and interpretation formula booklet** is required for this paper.
- The maximum mark for this examination paper is **[110 marks]**.

Please **do not** write on this page.

Answers written on this page  
will not be marked.

3. [Maximum mark: 5]

An artificial ski slope can be modelled as a triangular prism, as shown in the diagram. Rectangle ABCD is horizontal, and rectangle CDEF is vertical.

diagram not to scale

The maximum height of the ski slope, CF, is 17 metres and the steepest angle of the ski slope,  $\hat{FBC}$ , is  $21^\circ$ .

(a) Calculate the length of [BF]. [2]

The width of the base of the ski slope, AB, is 44 metres. Mayumi skis in a straight line, starting from point E and finishing at the base of the ski slope.

(b) Find the value of the least steep angle that Mayumi can ski. [3]

4. [Maximum mark: 7].

In a competition, a contestant has to move through a maze to find treasure. A graph of the maze is shown below, where each edge represents a corridor in the maze. The contestant starts at S and the treasure is located at T.

(a) Complete the adjacency matrix,  $M$ , for the graph.

[2]

	S	A	B	C	D	T
S	0	1	1	1	<input type="checkbox"/>	0
A	1	0	1	1	<input type="checkbox"/>	0
B	1	1	0	1	1	1
C	1	1	1	0	1	1
D	<input type="checkbox"/>	<input type="checkbox"/>	1	1	0	1
T	0	0	1	1	1	0

The competition rules state that the contestant can walk along a maximum of four corridors.

(b) Find the number of walks from S to T with a maximum of 4 edges.

[4]

(c) Explain why the number of ways the contestant can reach the treasure is less than the answer to part (b).

[1]

6. [Maximum mark: 6]

A cat runs inside a circular exercise wheel, making the wheel spin at a constant rate in an anticlockwise direction. The height,  $h$  cm, of a fixed point, P, on the wheel can be modelled by  $h(t) = a \sin(bt) + c$  where  $t$  is the time in seconds and  $a, b, c \in \mathbb{R}^+$ .

When  $t = 0$ , point P is at a height of 78 cm.

(a) Write down the value of  $c$ . [1]

When  $t = 4$ , point P first reaches its maximum height of 143 cm.

(b) Find the value of [3]

(i)  $a$ .

(ii)  $b$ .

(c) Write down the minimum height of point P. [1]

Later, the cat is tired, and it takes twice as long for point P to complete one revolution at a new constant rate.

(d) Write down the new value of  $b$ . [1]

Area with horizontal dotted lines for writing answers.

Please **do not** write on this page.

12. [Maximum mark: 5]

Four possible phase portraits for the coupled differential equations  $\frac{dx}{dt} = ax + by$  and  $\frac{dy}{dt} = cx + dy$  are shown, labelled A, B, C and D.

The matrix  $\begin{pmatrix} a & b \\ c & d \end{pmatrix}$  has eigenvalues  $\lambda_1$  and  $\lambda_2$ .

(a) Complete the following table by writing down the letter of the phase portrait that best matches the description. [3]

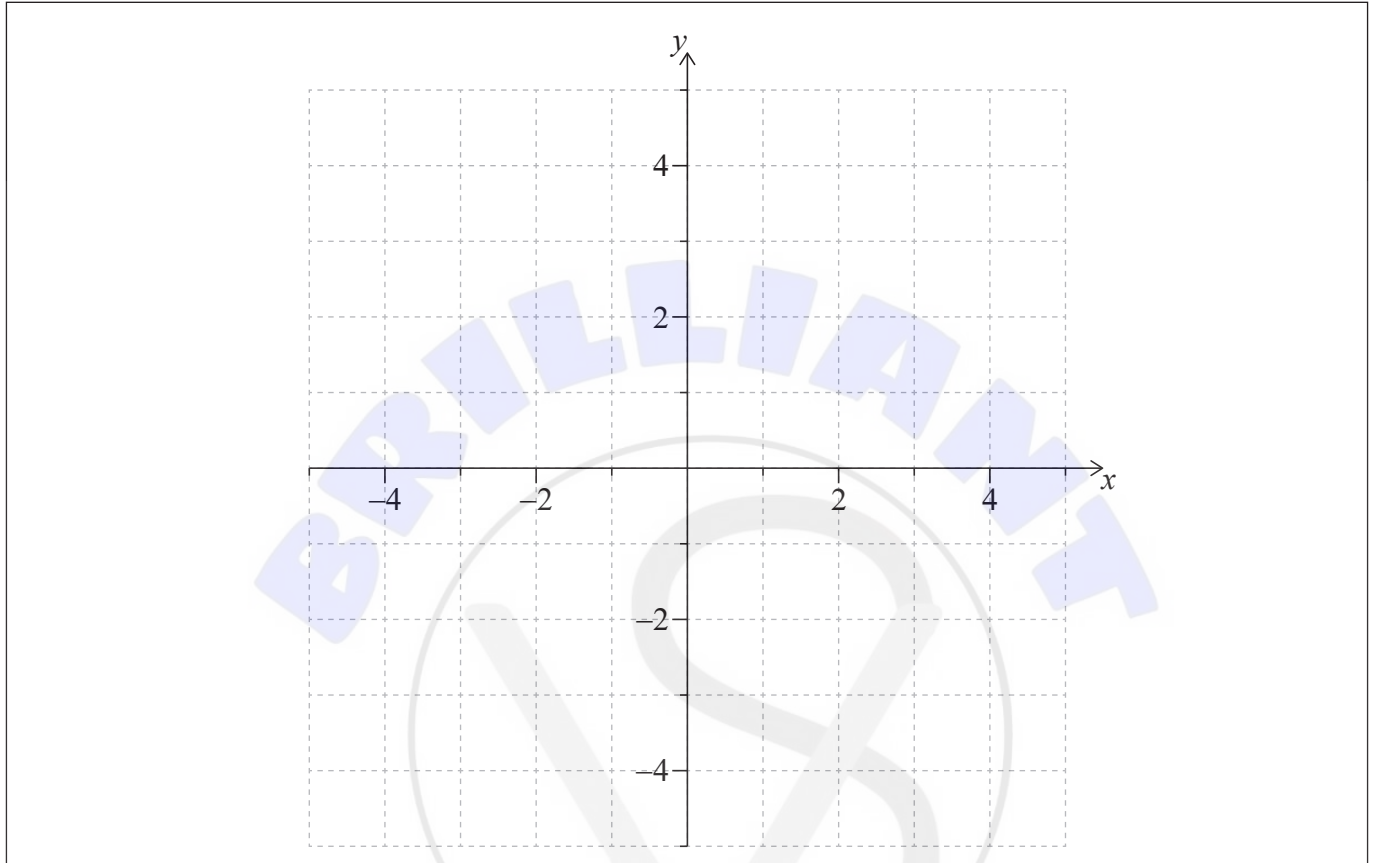

Description	Phase portrait
$\lambda_1 = 2$ with eigenvector $\begin{pmatrix} 2 \\ 1 \end{pmatrix}$ and $\lambda_2 = 3$ with eigenvector $\begin{pmatrix} 1 \\ -1 \end{pmatrix}$	
$\lambda_1 = 2$ with eigenvector $\begin{pmatrix} 2 \\ 1 \end{pmatrix}$ and $\lambda_2 = -3$ with eigenvector $\begin{pmatrix} 1 \\ -1 \end{pmatrix}$	
$\lambda_1 = -2$ with eigenvector $\begin{pmatrix} 2 \\ 1 \end{pmatrix}$ and $\lambda_2 = 3$ with eigenvector $\begin{pmatrix} 1 \\ -1 \end{pmatrix}$	

(This question continues on the following page)

(Question 12 continued)

- (b) On the following axes, sketch the phase portrait that corresponds to  $\lambda_1 = -2 + 3i$  and  $\lambda_2 = -2 - 3i$ , given that  $\frac{dy}{dt} = -12$  at  $(3, 0)$ . [2]

A large rectangular area containing horizontal dotted lines for writing the answer.

13. [Maximum mark: 6]

Gen is investigating the relationship between two sets of data, labelled  $P$  and  $Q$ , that she collected. She created a scatter plot with  $P$  on the  $x$ -axis and  $\log_{10} Q$  on the  $y$ -axis. Gen noticed that the points had a strong linear correlation, so she drew a line of best fit, as shown in the diagram. The line passes through the points  $(0, -1.3)$  and  $(6, 14.9)$ .

- (a) Find an equation for  $Q$  in terms of  $P$ . [3]

Gen also investigates the relationship between the same data,  $Q$ , and some new data,  $R$ . She believes that the data can be modelled by  $Q = a \ln R + b$  and she decides to create a scatter plot to verify her belief.

- (b) State what expression Gen should plot on each axis to verify her belief. [1]

The scatter plot has a linear relationship and Gen finds  $a = 4.3$  and  $b = 12.1$ .

- (c) Find an equation for  $P$  in terms of  $R$ . [2]
